

Topic	Key take-aways & next steps
Core Concept	• Rule-based RDoC Clinical Decision Support sidebar for cloud EHRs / AI-scribe tools. • Converts DSM code + short scales (SHAPS + PHQ-9) into circuit heat-map and evidence-ranked suggestions (ketamine, BA, tDCS, etc.).
Scientific Rationale	• NIH RDoC domains map symptoms → brain circuits → treatment mechanisms. • Rapid-acting therapies (ketamine, psychoplastogens, neuromodulation) already stratify patients by Positive-Valence, Cognitive Control, etc. • Sidebar lets clinicians use that science without leaving the chart.
Regulatory Path	• v1 qualifies as Non-Device CDS under 520(o): transparent rules, citations, clinician retains judgment → no FDA clearance needed. • Logs & QMS groundwork position v2 for a 510(k) ML tier (SaMD) when data scale justifies.
Go-to-Market (phased)	1. Patient MVP: web quiz (SHAPS) → RDoC report → clinic referral; KPI goals set (30 % start, 60 % finish, 5 % bookings). 2. Clinician micro-pilot: browser overlay inside TherapyNotes / Eleos—5 prescribers, 300 journeys; equity warrant milestone. 3. Marketplace scaling: list in open EHR app stores (athena, DrChrono) and AI-scribe platforms (Suki, Abridge).
Business Model	• SaaS \$100/prescriber/mo. • Employer PMPM \$5 + outcome bonus. • Data licensing to pharma/device \$250 k up-front + royalty.
Moats	• Practical: embedded workflow (note insertion, prior-auth PDF) — ripping out costs time & CPT revenue. • Knowledge: proprietary DSM↔RDoC translation table improves with every interaction. • Regulatory: optional future SaMD clearance.
Traction Plan	• Q3 2025 patient MVP (target 20 k users, 500 referrals). • Q1 2026 sidebar pilot (ARR \$0.3 M). • Q4 2026 marketplace launch (ARR \$3 M). • 2027 SaMD upgrade goal; ARR \$12 M yr-3.
Funding Ask	• Raise \$2 M seed → 18-month runway to pilot + ARR \$0.3 M. • Forecast ARR \$12 M @ 85 % GM by year 3; exit at 6–10× ARR.
Brand & Assets	• Preferred name: SynapSwitch. Backup: Switch CDS, Gauge CDS. • Delivered: one-pager, 12-slide pitch deck, elevator pitches (general & health-tech). • Design prompt for three-panel infographic.

**Prospective
Partners**

• Note-AI / MBC vendors: Eleos, Suki, Abridge, Blueprint. • Cloud EHRs: TherapyNotes, DrChrono, Valant. • Incentive: pilot warrant (0.25–0.5 %) + shared revenue.

**Key Talking
Lines**

“Grammarly-style sidebar for psychiatrists” — saves 2 min/note, meets measurement-based-care, no FDA delay, and builds the world’s first DSM-to-circuit outcome graph.
