

2. Monetization & Strategic Scoring

We evaluated four primary revenue streams using a 10-point distribution model across two different lenses:

Strategy	Low CAC Lens (Quick Wins)	Global TAM Lens (Total Revenue)
Startup "Watchlist"	4 (High hubris appeal)	1 (Lower per-unit dollar)
Global Compliance Portal	2 (Higher friction)	5 (Scalable "Big Boy" utility)
Clinical Insights/API	1 (Long sales cycles)	3 (High-value data licensing)
Verified Audit Seal	3 (Manual effort)	1 (Harder to scale globally)

3. The Startup "Watchlist" Pivot

The core strategy is to move away from solving "regulatory uncertainty" (which startups often ignore due to hubris) and toward a "Hang out with the Big Boys" value proposition.

- **The Hook:** Startups pay for proximity to FDA-cleared and CE-marked giants already in the database.
+1
- **Pricing Vision:** A tiered subscription model starting at **\$79–\$149/month** for a "Watchlist" seat, scaling to **\$1,500+/month** for enterprise-level global fleet monitoring.
- **Value Add:** Providing a "Compliance Readiness" PDF based on the internal **10-Point Clinical Assurance Checklist**.
+1

4. Execution Roadmap

To bring this strategy to life, the following developments are required:

Completely New Assets:

- **"The AI Elite" Landing Page:** Designed to benchmark startups against established Class II and III devices.

- **Payment Integration:** Specifically prioritizing **Peach Payments** for the South African market.
- **Aletia-ID Generator:** To handle devices that do not yet have official FDA K-numbers.

Required Updates:

- **Database Schema:** Adding **is_startup** and **market_status** fields to differentiate between cleared devices and those in "Stealth" or "Watchlist" mode.
+1
- **Security:** Activating **RLS policies** to protect proprietary startup data and payment information.
+1
- **UI/UX:** Updating search filters to allow users to toggle between established leaders and the "Watchlist" pipeline.
